

Benefit from our Experience

Get Training on Rapid Analysis of Cynatoxins, Pesticides & Other Contaminants

Efficient laboratory routines and high quality results often depend on the technical skill of laboratory personnel. Take advantage of over two decades of expertise in immunoassay kit and application development by allowing Gold Standard Diagnostics to train you on proper analytical technique. We will also provide tips and advice on sample collection and preparation to ensure outstanding results.

Brush up on your technique, train new hires or expand your program to include new analyses. Whether you are interested in using our lateral flow test strips or our ELISA plate kits, we will craft a training session to achieve your specific goals.

Training Options

We are happy to tailor training to your needs. Below are examples of common trainings we provide.

ELISA Refresher & New Operator Training

We offer customized full-day hands-on training for lab personnel on rapid contaminant analysis using Gold Standard Diagnostics ELISA test kits and equipment. Training is available:

- On-site at your facility (for up to 3 participants)
- Or at our facility in Warminster, PA (USA)

Hands-on Workshops

We conduct hands-on and online workshops for researchers, watershed managers and citizen monitoring groups and others on the use of our lateral flow test strips for on-site screening.

Workshops range from 10-30 participants and 1-4 hours in length. Content is tailored to your needs.

Technical Consultation

Our staff is available via telephone and email to answer your questions about your specific application needs. Contact us for advice on topics such as:

- Sample collection & storage
- Sample extraction & analysis

Our no-hassle, on-site training programs save time and trouble, while giving you confidence in your ability to produce the best data possible. Training is available:

- On-site at your facility (training for up to 3 participants)
- At our facility in Warminster, PA (USA)
